

# 133 and 233

## Light Commercial & Commercial Regulator

The 133 and 233 regulators are designed for light commercial and commercial uses such as industries and heating plants, as well as for all installations where accurate pressure control, easy adjustment and fast response times are required, such as for burners, industrial ovens, boilers, etc.

### KEY BENEFITS

- » Wide range of interchangeable orifices
- » Can be installed in any position
- » Cartridge-type construction allows easy unit withdrawal without removing body from pipeline
- » Complies with high temperature requirements
- » Approved by German DVGW

### DESCRIPTION

The 133 and 233 regulators are direct-acting, spring loaded regulators with a built-in safety shut-off device.

A large choice of orifice sizes enables perfect matching of the different flow rates and inlet pressures.

The lever system ensures exact outlet pressure and fast response when the flow rate varies.

The 133 regulator and the flanged versions of the 233 regulators are equipped with a built-in filter (filtration grade 0.5 mm).

### Technical Specifications

Maximum inlet pressure	8 bar
Outlet pressure	10 mbar - 0.55 bar
Accuracy & lock-up pressure	Up to AC 5 / up to SG 10
Operating temperature	Gas: -20°C to +60°C
Ambient temperature	-30°C to +60°C (body material)
Acceptable gases	Natural gas, propane, butane, air, nitrogen and all non-corrosive gases.
Safety devices	Optional built-in safety shut-off valve: - OPSO: Over-pressure shut-off - UPSO: Under-pressure shut-off
Options	Safety diaphragm - Safety relief valve

### Connections

Sizes	DN 25, DN 40 and DN 50
Dimensions	See table page 2
Flanges	PN16
Thread	Rp 1 - EN 10226-1

### Materials

Body	EN-GJS-400-15 DIN EN 1563
Actuator	Cast aluminium GD-Al Si 12, DIN 1725
SSV actuator	Brass
Internal parts	Brass/Steel, zinc protected
Seals	NBR rubber/Viton
Diaphragm	NBR rubber/NBR rubber, reinforced fabric

133 regulator with 033 safety shut-off valve (pds) and internal relief valve

Safety Shut-off valve type I (pso) - Details

Safety Shut-off valve type II (pdsu and pds) - Details

## BODY SIZES & ACTUATOR TYPE

### Selecting the Actuator

Regulator Type	Actuator Type	Set Range (Wds)
133	-	8 - 210 mbar
	HP	140 - 420 mbar
233	-12	8 - 210 mbar
	-8	30 - 550 mbar

133 and 233 are differential strength, tightness-tested regulators.

### BODY SIZES

Type 133

Type 233-12

Type 233-8

## SPECIAL FEATURES

### Gas loss protection:

- » this feature is available on the 133 regulator, where it replaces the UPSO function. In case the outlet pressure drops (to around 50% of the set value), the protection valve closes and interrupts the gas flow. A minimum bleed continues to feed the outlet installation. The protection valve is automatically reset when outlet installations are closed and outlet pressure increases back to the set value.
- » Outlet pressure might drop accidentally due to inlet pressure dropping below specifications, or gas demand exceeding the regulator capacity.

Gas loss protection should not be used when inlet pressure exceeds 1 bar.

### Safety diaphragm:

- » this feature offers protection in case of rupture or leak at the main diaphragm. It limits the gas flow rate coming out through the vent connection to around 30 l/h. When the safety diaphragm is pressurized by a large gas leak from the main diaphragm, the outlet pressure increases by around 50%, and thus triggers the safety shut-off valve (OPSO).

Safety diaphragm should not be used when inlet pressure exceeds 1 bar.

### External control line:

- » 133 and 233 regulators are delivered with an internal control line that optimises the regulator function due to the Venturi effect around the valve disc. However an external control line is recommended in case inlet pressure exceeds 4 bar. In this case, the internal control is removed.

### Relief valve setting:

The standard relief spring setting is 30 mbar above the outlet setting, with an accuracy of 10%.

Design with built-in safety diaphragm

## SAFETY SHUT-OFF VALVE

### Selecting the SSV

Type	Max. operating pressure	Function	Range	
			Wdo	Wdu
033	5 bar	OPSO	40 mbar to 0.45 bar	-
I	8 bar	OPSO	20 mbar to 1.0 bar	-
II	8 bar	OPSO & UPSO	20 mbar to 1.0 bar	8 to 50 mbar

Note that OPSO and UPSO settings are adjustable separately.

### Fire Resistance:

Every shut-off valve is equipped with a temperature fuse that triggers the valve in case of high temperature (around 180 to 200°C).

### DVGW Safety Recommendations:

133 and 123 regulators are approved by the German DVGW under specific conditions concerning German regulations on safety and gas installations:

- » Inlet pressure below 6 bar
- » OPSO and UPSO safety shut-off valve is required when inlet pressure exceeds 5 bar.

Pressure Regulator 133

**Correction factor for non-natural gas applications:**

The flow rates are indicated for a 0.6 specific gravity gas. To determine the volumetric flow rate for gases other than natural gas, multiply or calculate the values in the capacity tables using the sizing equations with a correction factor. The table below lists correction factors for some common gases:

Gas type	Specific gravity	Correction factor
Air	1.00	0.77
Butane	2.01	0.55
Carbon dioxide (dry)	1.52	0.63
Carbon monoxide (dry)	0.97	0.79
Natural gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air mix	1.20	0.71

*Specific gravity or relative density (air = 1, non-dimensional value)*

Use the following formula to calculate the correction factor for gases not listed above. In the formula, d is the specific gravity of the gas.

$$\text{Correction factor} = \sqrt{\frac{0.6}{d}}$$

### Correction factor for non-natural gas applications:

The flow rates are indicated for a 0.6 specific gravity gas.

To determine the volumetric flow rate for gases other than natural gas, multiply or calculate the values in the capacity tables using the sizing equations with a correction factor.

The table below lists correction factors for some common gases:

Gas type	Specific gravity	Correction factor
Air	1.00	0.77
Butane	2.01	0.55
Carbon dioxide (dry)	1.52	0.63
Carbon monoxide (dry)	0.97	0.79
Natural gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air mix	1.20	0.71

*Specific gravity or relative density (air = 1, non-dimensional value)*

Use the following formula to calculate the correction factor for gases not listed above. In the formula, d is the specific gravity of the gas.

$$\text{Correction factor} = \sqrt{\frac{0.6}{d}}$$

## ASSEMBLY POSITION

Please indicate the desired assembly position when you order. If not otherwise stated, the regulators are assembled and adjusted for normal installation (position 2):

- » Regulator 133-vent pointing outward
- » Regulator 233-vent pointing inward

Pos.3 and Pos.4 are not possible for the DN 50 flanged version of regulator 233, when fitted with type 033 SSV.

## INSTALLATION

- » Diaphragm casing can be mounted in any position relative to the body through a full 360° angle.
- » For OUTDOOR installations, position the vent so that rain, snow, moisture, or foreign particles cannot enter the vent opening. Note: Itron recommends that the vent be positioned to face downward to avoid entry of water or other matter interfering with the proper operation of the regulator. The vent should be located away from building eaves, window openings, building air intakes, and above the expected snow level at the site. The vent opening should be inspected periodically to ensure that it does not become blocked by foreign material.
- » For INDOOR installations, pipe the vent to the outside atmosphere using the shortest length of pipe, the least number of elbows and with a pipe diameter as follows: up to 3 m length: DN 20 - up to 5 m length: DN 25 - above 5 m length: at least DN 40. The outlet end of the pipe must be protected from moisture and the entrance of foreign particles.
- » Under German DVGW rules, it is not necessary to pipe the vent for an indoor installation, when the regulator is fitted with a safety diaphragm and the inlet pressure does not exceed 1 bar.

## Dimensions (mm)

Model	Thread	Flange	A	B	C'	C	D	E	F	G	H	J Exhaust Connection	K	Weight in kg (approx.)	
														(1)	(2)
133-	1"	DN 25	190	155	100	160	170	100	100	75	120	Rp ¾	74	4	6
233-12	•	DN 40	350	250	•	200	265	155	115	75	120	Rp 1	110	11	15
233-12	•	DN 50	350	250	•	200	265	155	115	75	120	Rp 1	110	•	16
233-8	•	DN 40	260	250	•	200	220	125	115	75	120	Rp 1	105	9	13
233-8	•	DN 50	260	250	•	200	220	125	115	75	120	Rp 1	105	•	14

In case of external control lines (optional), the regulator is provided with the following fittings:

- » Regulator 133: G¼, Ermeto 12,
- » Regulator 233: G½, Ermeto 12,
- » SSV: G⅛, Ermeto 6%.

## TYPE DESIGNATION

XX- 133 233	XX-	X-	XXX-	Variant Type
	8			
	12			
				n Max. inlet pressure (see brochure)
			31	Without safety devices
			32	SRV
			34	Gas loss protection*
			36	Gas loss protection* and SRV
				<b>With type I or II SSV</b>
			61	OPSO
			62	OPSO and SRV
			64	OPSO and UPSO
			66	OPSO, UPSO and SRV
			630	OPSO and safety diaphragm
			650	OPSO, UPSO and safety diaphragm
				<b>With type 033 SSV</b>
			71	OPSO
			72	OPSO and SRV
			77	OPSO, gas loss protection* and SRV
			730	OPSO and safety diaphragm
			770	OPSO, gas loss protection* and safety diaphragm

\*Available only on 133 regulator

### Information to be specified when ordering:

- » Regulator type code
- » Body size and connections
- » Minimum and maximum inlet pressures
- » Outlet pressure range
- » Outlet pressure setting
  - OPSO setting\*
  - UPSO setting\*
